

ABSTRACT**Irrigation System**

- 5 The irrigation system comprises a reservoir (1) for irrigating liquid, a probe (3) for arrangement in a user, conduit means (6,7,10,11) for conducting the irrigating fluid from the reservoir to the probe, and a fixation member (5) for fixation of the probe in the user. Pumping means (9) are provided for pumping gas into the reservoir (1) to transfer the irrigating liquid from the reservoir to the probe (3). The
- 10 fixation member includes an inflatable cuff (5), and the system includes a control unit (8) which may be set in at least a cuff inflating position and a liquid transferring position.
